helpful tips to implementing that without searching any other topics:

```
class ApplicationToolbar extends StatelessWidget with PreferredSizeWidget{  
  @override  
  Widget build(BuildContext context) {  
    return AppBar( ... );  
  }  
}
```

```
  @override  
  Size get preferredSize => Size.fromHeight(kToolbarHeight);  
}
```

[May 19, 2021 at 8:15](#)
- To use with TabBar: const Size.fromHeight(kToolbarHeight + kTextTabBarHeight);
